SNOWFLAKE COCO CLI HACKATHON 2026

RegChange RuleTrace

Regulatory Change Impact & Control Intelligence

Trace. Analyze. Validate. Govern.

[GitHub: github.com/yogeshwagh450/regchange-ruletrace](https://github.com/yogeshwagh450/regchange-ruletrace)

[Live prototype: RegChange Streamlit app \(click to open\)](#)

REGCHANGE RULETRACE

A threshold change is an operational decision

A lower monitoring threshold can materially change workload before a rule goes live.

01

Interpret circular

02

Estimate alert impact

03

Update ad hoc SQL

04

Seek approval

The gap

Teams can lack a reproducible before/after replay, a clear view of newly affected accounts, and a decision record tied to evidence.

The question

Before changing a control: how many alerts and accounts change, which control is affected, and who approved the proposal?

REGCHANGE RULETRACE

One governed workflow, five visible stages

01

EXTRACT

Cortex proposes typed fields from fictional policy text.

02

MAP

Resolve the proposal to AML_THRESHOLD_10L metadata.

03

REPLAY

Compare old and proposed thresholds on the same history.

04

QUANTIFY

Show alert counts, change, and affected accounts.

05

REVIEW

Record approve/reject with a reviewer comment.

AI proposes. Deterministic SQL measures. A human decides.

The Streamlit prototype exposes Policy Extraction, Run Backtest, Run History, Review & Approve, and Ask Analyst.

REGCHANGE RULETRACE

A Snowflake-native prototype with explicit boundaries

RegChange — Regulatory Change Impact & Control Intelligence

All policy text, transactions and thresholds shown here are synthetic / fictional and for hackathon demonstration only. Nothing on this page constitutes production AML advice.

[Policy Extraction](#) [Run Backtest](#) [Run History](#) [Review & Approve](#) [Ask Analyst](#)

AI-Powered Policy Change Extraction

Paste a regulatory circular below. Snowflake Cortex extracts the structured change proposal (rule, thresholds, effective date) for review before backtesting.

Policy text (Fictional)

FICTIONAL REGULATORY CIRCULAR — FOR DEMONSTRATION ONLY

Circular No. AML/2026-07/DEMO
Date: July 15, 2026
Subject: Revision of Threshold for Reporting of Cash and Suspicious Transactions

In exercise of powers conferred under the Prevention of Money Laundering Act, the threshold for reporting high-value transactions under the AML framework is hereby revised.

Current threshold: INR 10,00,000 (Rupees Ten Lakh)
Revised threshold: INR 5,00,000 (Rupees Five Lakh)
Effective date: October 1, 2026

Extract with Cortex

FICTIONAL SAMPLE CIRCULAR

INR 1,000,000 -> INR 500,000

Cortex extracts the rule, parameter, proposed threshold, currency, effective date, and summary. The UI offers extracted values for review before backtesting.

Reviewer verifies before use.

REGCHANGE RULETRACE

Replay the same history under both thresholds

ILLUSTRATIVE EXPECTED OUTPUT

132

Baseline alerts

200

Proposed alerts

+68

Alert delta

+51.52%

Relative increase

50

Accounts under proposed rule

47

Accounts with New Alerts

47 accounts have transactions in the newly monitored band; some also have baseline alerts. This is not a first-time-account count.

REGCHANGE RULETRACE

Review is recorded; control promotion stays separate

RegChange — Regulatory Change Impact & Control Intelligence

All policy text, transactions and thresholds shown here are synthetic / fictional and for hackathon demonstration only. Nothing on this page constitutes production AML advice.

Policy Extraction Run Backtest Run History Review & Approve Ask Analyst

Approve or Reject a Backtest Proposal

Select a completed backtest run and record your review decision. This action is logged for audit; it does not automatically promote the rule.

Select backtest run
INR 500,000 | Δ 68 alerts | 2026-09-30 23:34

Decision
☒ APPROVED ☐ REJECTED

Reviewer comment

Submit Review

Decision record

Reviewer, approve/reject decision, comment, run ID, and review timestamp are written to REVIEW_LOG.

Remediation preview

The app displays proposed versioning SQL as a preview. It does not automatically promote the rule.

Audit chain: baseline -> backtest run -> review decision -> optional, separately executed change.

REGCHANGE RULETRACE

Ask questions against governed definitions

PLAIN LANGUAGE

Ask about transactions, backtests, or approvals.

Cortex Analyst uses the RegChange Semantic View. The app displays the returned SQL and, when available, query results.

RegChange — Regulatory Change Impact & Control Intelligence

All policy text, transactions and thresholds shown here are *synthetic / fictional* and for hackathon demonstration only. Nothing on this page constitutes production AML advice.

[Policy Extraction](#) [Run Backtest](#) [Run History](#) [Review & Approve](#) [Ask Analyst](#)

Natural Language Query — Cortex Analyst

Ask questions about transactions, backtests, or approvals in plain English. Powered by a **Semantic View** over the RegChange data and Cortex Analyst.

Sample questions

How many total transactions are there?

Your question

How many total transactions are there?

Ask Cortex Analyst

☐ Cortex Analyst is generating SQL...

This tab uses the Cortex Analyst REST API with the RegChange Semantic View. Unlike generic LLM SQL generation, Cortex Analyst generates queries grounded in defined metrics, dimensions, and relationships — ensuring consistent, governed results.

SYNTHETIC HACKATHON DEMO | FICTIONAL AML SCENARIO

REGCHANGE RULETRACE

Why RegChange RuleTrace Stands Out

AI-ASSISTED

Cortex proposes policy fields and executive summaries for review

IMPACT-FOCUSED

Measures historical alert and account-band impact before implementation

REVIEWABLE

Defined measures, versioned controls and recorded human decisions; promotion is separate

SNOWFLAKE-NATIVE

Platform services with Python dependencies; no third-party datasets

Cortex COMPLETE | Cortex Analyst REST API

Semantic View: 10 metrics, 13 dimensions, 5 facts

Streamlit container runtime | SQL procedures | Zero-copy clone

CoCo CLI development workflow

REGCHANGE RULETRACE

Impact, Scope & Future Roadmap

Value Today

AI-assisted interpretation
Historical alert comparison
Saved runs and reviews
Business questions in plain language

What We Built

10,000 synthetic transactions
Five-tab Streamlit app
Cortex, SQL replay and Analyst
Versioned baseline and review log

What Comes Next

Validated multi-rule support
Persisted policy evidence
Ingestion and quality checks
Per-run isolation and safe promotion

Synthetic transactions and fictional policy. No third-party data feeds; Snowflake Analyst REST API is used.

REGCHANGE RULETRACE

From Regulatory Circular to a Measured, Reviewable Compliance Decision.

AI proposes. Deterministic replay quantifies. Humans approve.
